

Contents

Optimized rumen and gut health in dairy cattle: the U.S. approach	11
<i>M.F. Hutjens</i>	
1. Introduction	11
2. Carbohydrate metabolism in the rumen	11
3. Lower gut function	18
References	20
Digestive health and pathogenic load in cattle: impact on food safety	21
<i>S. Calsamiglia</i>	
1. Introduction	21
2. Preharvest control measures	22
3. Conclusion	29
References	29
Enteric methane production by ruminants and its control	35
<i>J.-P. Jouany</i>	
1. Introduction	35
2. Origin of methane	35
3. Impact of fermentation pattern on ruminal methanogenesis	37
4. Economic and environmental impact of enteric methane emissions by ruminants	40
5. Conclusion	51
References	52
Rate of nitrogen and energy release in the rumen and effects on feed utilisation and animal performance	61
<i>L.A. Sinclair</i>	
1. Introduction	61
2. Interaction between rate of energy and nitrogen supply to the rumen on microbial metabolism.	61
3. Infusion studies	63
4. Rumen metabolism <i>in vivo</i>	63
5. Effects on animal performance	66
6. Non-protein nitrogen (NPN)	69
7. Implications	73
References	74

Calf gut health: practical considerations	79
<i>D. O'Rourke</i>	
1. Introduction	79
2. Incidence and causes of mortality	79
3. Lack of immunity	82
4. Management of calf scours	83
5. Conclusion	90
References	90
The role of MOS source and structure on antibiotic resistance of pathogenic bacteria	95
<i>J.M. Tricarico and C.A. Moran</i>	
1. Introduction	95
2. Efficacy of yeast cell wall preparations to control the persistence and dissemination of antibiotic resistance in bacteria	98
3. Conclusions	107
References	107
