

Unique photographs in e-learning environment and book 'Insects as food and feed: from production to consumption'

Edible insects are expected to become an important source of protein for human and animal consumption. The book 'Insects as food and feed: from production to consumption' will pay attention to edible insect production, covering the complete process from rearing to marketing. The book will be enhanced with a unique e-learning environment, showing 360 degrees view photographs of several edible insects.

Both the book and e-learning environment will contain stacked macro photographs of insects discussed in the book. The viewer will be able to look at the insects with a level of detail that is rarely seen. The e-learning environment is a cooperation of [Wageningen Academic Publishers](#), [AgriHolland](#), photographer Hans Smid, and editors Arnold van Huis and Jeffery Tomberlin. The e-learning environment will be funded by the [Uyttenboogaart-Eliassen Stichting](#). The book and e-learning environment will become available in September 2017. For more information, see www.wageningenacademic.com/iff
