# Table of contents

## Setting the scene

1. Diet and nutrition in fertility: an overview including special requirements with ageing  
   *J.H. Ford*  
   17

2. Fertility in women  
   *H. Daabis and T.A. Gelbaya*  
   33

3. Psychophysiological changes in the menstrual cycle phases  
   *M.K.B. Lustyk, E.A. Shilling, D.L. Reaves and C.M. Hokama*  
   47

## Puberty, menarche and the menstrual cycle

4. Age at menarche: international perspectives  
   *M. Celik*  
   67

5. Menarcheal onset and body composition  
   *S. Kirchengast*  
   79

6. Calcium intake and premenstrual syndrome  
   *B.B. Takashima-Uebelhoer and E.R. Bertone-Johnson*  
   95

7. Diet and eating changes in premenstrual syndrome  
   *N. Erbil*  
   109

8. Vitamin D and other nutrients in the treatment of premenstrual syndrome  
   *F. Cioni and F. Ferraroni*  
   121

9. Perimenstrual chocolate craving: from pharmacology and physiology to cognition and culture  
   *J.M. Hormes*  
   137

10. The influence of body mass index and socioeconomic status on pubertal development  
    *A. Bereket and Z. Atay*  
    155
Table of contents

11. Neuroimaging menstrual cycle associated changes in appetite
   D.A. Van Vugt and R.L. Reid 169

12. Fluctuations of appetite and food intake during the menstrual cycle
   S.A. Tucci 189

13. Dietary strategies contributing to low energy availability in exercising women: underlying
    physiology and impact on the menstrual cycle
   B.R. Hill and N.I. Williams 207

14. Iodine deficiency: female menstrual cycle to conception
   F. Vermiglio, M. Moleti and E. Trimarchi 223

15. The menstrual cycle and lipid levels
   S.L. Mumford, K.C. Schliep, A. Prasad and E.F. Schisterman 239

16. Menstrual patterns in adolescents with eating disorders
   A. Deltsidou 255

Conception

17. Role of micronutrients in the periconceptional period
   I. Cetin, M. Massari and F. Parisi 273

18. Prevalence and predictors of periconceptional folic acid use
   R.P. Deane and D.J. Murphy 293

19. Lower fertility associated with periconceptional obesity and underweight
   E. Derbyshire 313

20. Preconception care and barriers to addressing overweight and obesity: a focus on
    weight loss advice and weight loss strategies
   M. Dekker Nitert, H.L. Barrett, S. de Jersey, K. Matusiak, H.D. McIntyre and
   L.K. Callaway 327

21. Herbal medicine and fertilisation
   L. Stocker and Y. Cheong 343

22. Diet containing endocrine-disruptors and reproductive health
   D. Balabanič and A. Krivograd Klemenčič 359
Fertility-infertility

24. Vitamin D and assisted reproductive technology
   A. Mahdavi and H. Hosseini Jadda

25. The impact of obesity on ovulation and early pregnancy: a focus on ovarian function, fertilization, implantation and early embryo development
   A. Gonzalez-Bulnes and S. Astiz

26. Nutraceutical approaches in female infertility: setting the rationale for treatments tailored to the patient’s phenotype and based on selected molecules
   E. Papaleo, V.S. Vanni and M. Candiani

27. Folate and female infertility: folate-metabolizing pathway in folliculogenesis, infertility treatment, and implantation
   S. Altmäe, M. Laanpere, C. Campoy and A. Salumets

28. Dietary intolerance and endometriosis: an immunological link in the pathogenesis of an enigmatic disease?
   Y. Muscat Baron

29. Gastro-intestinal symptoms in women with pelvic endometriosis
   Y. Muscat Baron

30. The role of vitamin D for conception, polycystic ovary syndrome, endometriosis and the menstrual cycle
   M. Grundmann and F. Von Versen-Höynck

31. Polycystic ovary syndrome and the metabolic syndrome
   T.J. Hunter and R. Hart

32. Diabetes mellitus and polycystic ovary syndrome: implications for diet and nutrition
   N. Mendoza and M.J. Cancelo

33. Hypocaloric diets in overweight and obese patients with polycystic ovary syndrome
   S. Palomba, A. Falbo and G.B. La Sala

Preface

The reproductive cycle in women is rather complex and can be considered to begin with epigenetic programming and ending with post-menopause. Intervening steps involve a variety of processes including for example the development of the sex organs, menarche, episodic endocrine cycles, menstruation, ovulation and conception. The optimal conditions for these processes results in a fertile individual in which conception, pregnancy and birth of an offspring can arise. However all of these processes can be influenced by diet and nutrition and \textit{vice versa}. Body composition also has an impact on the menstrual cycle and fertility. These factors in turn also influence body composition \textit{per se}. For example, the menstrual cycle has a marked influence on diet selection and food consumption. Similarly, either food deprivation, dietary excess or obesity can result in marked changes in the menstrual cycle with a concomitant effect on fertility. The complex web of diet, nutrition, body composition, menstruation, ovulation and fertility can only be understood and untangled is there is a comprehensive source of scientific material. Ideally such text should be within a single source that is structured in such a way as to treat all these aforementioned factors as being dependent on each other in multiple ways. The ‘Handbook of diet and nutrition in the menstrual cycle, conception and fertility’ achieves this by having a structured focus with the following main parts:

1. setting the scene;
2. puberty, menarche and the menstrual cycle;
3. conception;
4. fertility-infertility.

Coverage includes micronutrients in general, calcium, iodine, vitamin D, folic acid and folate, herbal medicine, nutraceuticals, chocolate, fertility, ageing, psychophysiological changes, menarche, body composition, premenstrual syndrome, treatment of premenstrual syndrome, body mass index, socioeconomic status, neuroimaging, appetite, dietary strategies, exercise, lipid levels, eating disorders, obesity and underweight, barriers, weight loss advice, endocrine-disruptors, anaemia, gastric bypass, ovarian function, embryo development, folliculogenesis, infertility, implantation, dietary intolerance, endometriosis, gastrointestinal symptoms, polycystic ovary syndrome, metabolic syndrome, diabetes, hypocaloric diets and many other area relevant to the interrelations between diet, nutrition, the menstrual cycle, conception and fertility.

Contributors are authors of international and national standing, leaders in the field and trendsetters. Emerging fields of science and important discoveries relating to the menstrual cycle, periconception and fertility will also be incorporated in the ‘Handbook of diet and nutrition in the menstrual cycle, conception and fertility’. This represents one stop shopping of material related to the menstrual cycle, periconception and fertility and will be essential reading for endocrinologists, cardiologists, nutritionists, dietitians, paediatricians, pharmacologists, health care professionals, research scientists, general practitioners as well as those interested in women’s health in general.

\textit{The editors}
